

Engineered Non-Woven Fabrics

ABOUT FOSS MANUFACTURING COMPANY, LLC

GENERAL INFORMATION

Foss Manufacturing Company, LLC is a vertically integrated producer of engineered, non-woven fabrics and specialty synthetic fibers for an ever-increasing variety of applications and markets. Using state-of-the-art, computerized production in Hampton, New Hampshire, we are unrivaled in our ability to efficiently and effectively design, manufacture, convert, package, and distribute a vast array of products worldwide. As one of the world's largest needle-punch based manufacturers, we have the expertise and experience to support customers' needs across virtually all applications and markets.

NOT YOUR TYPICAL MANUFACTURING COMPANY

We are driven by innovation. Our commitment to extensive research and development of new and improved products and technologies is supported by a team of experienced engineers and chemists. That dedication to research and development has paid off. With numerous industry firsts and hundreds of exclusive patents, we are the leader in bringing new specialty non-woven products to market.

PARTNERS IN SUCCESS

The success of our work comes in large part from the collaborative relationships we develop with clients. Our research and development team routinely works alongside our customers to find the best possible solutions. Foss' approach to problem-solving combined with the experience and skills of our team members enable us to consistently accelerate development time and provide products that exceed our customers' expectations.

BUSINESS UNITS

Our business units are comprised of highly trained professionals who are dedicated to serving customers on an individual basis to assure 100% satisfaction. We are uniquely qualified to pioneer the design of a vast array of components, applications and ready-to-use products that address the complexities of safety, performance, uniformity, aesthetics or any combination thereof. Our patented **Fosshield**® fiber technology contains a unique antimicrobial, antiviral agent that effectively inhibits the growth of destructive bacteria, mold, mildew, and other fungi, while our **Ecospun**® polyester fiber provides customers with a unique product made from 100% certified recycled plastic PET bottles. We create specialized textile solutions through our **Ozite**® division and craft felt through our **Kunin**® Group division. Additionally, we are vested in providing solutions to automotive OEMs and deliver specialty fibers and technical fabrics to an array of industries.

OUR CORPORATE PHILOSOPHY

Since 1954, our customers have depended on us for highly specialized, cost-effective products that are custom tailored to their requirements. From raw materials to finished fabrics, our dedication to delivering the highest quality is unsurpassed, whether in one-of-a-kind products, or industry standard media. All of our Business Units are ISO 9001 and QS 9000 certified and our rigorous Ten-Point Quality Operating System and Process Controls are based on our simple mantra, "*Do It Right the First Time*", to optimize reliability and reduce costs.
